DataThreat Website Deployment Checklist

1. Cloudflare Workers Setup
   - Install Wrangler CLI: `npm install -g wrangler`
   - Authenticate: `wrangler login`
   - Configure wrangler.toml with your account_id, zone_id, and route
   - Run `wrangler publish` to deploy

2. DNS Configuration
   - Add A Record: Name = @, IPv4 = 192.0.2.1, Proxy = Proxied
   - Add CNAME Record: Name = www, Target = yourdomain.com
   - Ensure route in wrangler.toml matches your domain

3. SSL Settings
   - Set SSL Mode to Full or Full (Strict)
   - Enable Always Use HTTPS
   - Enable Automatic HTTPS Rewrites

4. Formspree Integration
   - Go to formspree.io and create a form
   - Copy the endpoint URL
   - Replace the form action in index.html with your endpoint

5. Cloudflare Pages Alternative
   - Go to Cloudflare Dashboard > Pages
   - Create a new project and upload your site files
   - Assign your custom domain under Custom Domains
